Opportunity for Research Experience Internship in Clinical Neuropsychology and Neurology

Researchers in Neurology and Neuropsychology are recruiting an Intern Research Assistant (RA) to assist with a research project on children with epilepsy. In this project, we will be entering data from medical-surgical work-up, fMRI, TMS, EEG and neuropsychological assessment. The RA will have the opportunity to learn about neurology, epilepsy, and brain surgery.

If chosen as an intern in our research group, we may ask you to help with this study in the following ways. Training will be provided in any unfamiliar procedures.

- Creating and maintaining research databases
- Photocopying, filing, organizing
- Medical chart review
- Statistical analysis
- Assisting with publications

This is an EXCELLENT opportunity for any student interested in attending graduate school in psychology, neuropsychology, or medical school. Learn about research methods and design, data management and analyses, and these careers' personal and professional requirements. If interested, please send a cover letter, resume and availability to interview to Alyssa.Ailion@childrens.harvard.edu.

Requirements:

- Students must be pursuing an undergraduate degree and enrolled at a four-year institution, preferably majoring in Biology, Chemistry, Neuroscience, Psychology, Health Policy Management or related fields.
- Must be in Junior or Senior year of college.
- Must have consistent access to a computer and a stable internet connection
- We require a 1-year commitment of 8 hours per week, which must be completed in at least 4-hour time blocks.
- Strong organizational and time management skills. Attention to detail is highly valued.
