Project Manager/Clinical Interviewer
at Brown Medical School & the Miriam Hospital

Substance Use During Pregnancy and Infant Development

The Maternal Infant Studies Laboratory at the Miriam Hospital, a Brown University teaching hospital, is seeking a project manager/interviewer to oversee daily operations and assist with clinical interviews for longitudinal studies investigating maternal substance use during pregnancy and infant behavior. In particular, our laboratory is interested in the pathways/mechanisms through which prenatal substance use impacts neurobehavioral development in the next generation, as well as novel phenotypic markers of disruptions to fetal and infant neurobehavioral development.

The Project Manager/Interviewer will work closely with PI, Dr. Laura Stroud (https://vivo.brown.edu/display/lstroud) and other members of the leadership team. Primary responsibilities involve managing daily operations including staff supervision and conducting clinical interviews. Strong organizational, supervisory and interpersonal skills preferred. Experience with project coordination and IRB/grant submissions desirable. Position involves working in a fast-paced environment within a multidisciplinary research team. Potential need for schedule flexibility to accommodate participant visits. Personal transportation required.

Minimum Qualifications: BA/BS and at least two years of prior full-time experience with clinical research is required. The position requires keen attention to detail, organizational and planning abilities and excellent interpersonal skills. The individual in this position will be working on several projects simultaneously.

To be considered for this position, please send resume and cover letter to Laura Stroud, PhD: Laura_Stroud@brown.edu
