Dekel Lab, MGH Psychiatry, Seeking Research Coordinator(s)

The Dekel lab (https://massgeneral.link/DekelLab) at the Department of Psychiatry of Massachusetts General Hospital studies maternal psychopathology following the singular event of childbirth. Our aim is to develop empirically based therapies and accurate tools for early identification of women at risk for postpartum mental illness to lower the odds of maternal morbidity and protect the child at risk.

We are seeking clinical research coordinators to take part in an NIH investigation and related research activities on maternal mental psychopathology.

Please see link to posting below. Students are welcome to contact Dr. Dekel directly (sdekel@mgh.harvard.edu) to inquire about this posting and other research opportunities in the lab.
