

## **Job Advertisement**

The Child and Adolescent Mood Program (CAMP) at Emory University is seeking applicants for two full-time **paid** Clinical Research Coordinator positions. The positions require a two-year commitment starting summer 2018. Under the direction of Dr. W. Edward Craighead, CAMP's research examines treatment outcomes in children and adolescents with anxiety and mood disorders. Specifically, CAMP's current research studies the effects of behavioral, genetic and neurological variables on treatment outcomes in adolescents receiving Behavioral Activation and CBT for depression. The research coordinators will support the day-to-day activities of CAMP's research projects. The position also includes coordination of CAMP's clinical activities, and over the course of the two years the selected individuals will get clinical exposure to assessment and treatment by a wide variety of faculty and doctoral-level trainees.

The individuals in these positions are responsible for managing an active research lab with multiple adolescent treatment studies and aiding in the administration of an Intern training clinic. Research responsibilities include participant recruitment, creation of study materials, data collection and management, study scheduling, clinical interviewing of research participants (patients and healthy controls), preparation of IRB materials, and most coordinators participate in the preparation of poster presentations and research papers. Other tasks include supervising undergraduate Research Assistants, scoring and creating score reports for clinical assessments, managing various aspects of our training clinic, creating clinical schedules, and sitting-in on clinical team meetings.

### Qualifications:

- Bachelor's degree in psychology or a related field (e.g., pre-med, human development)
- At least one year of part-time laboratory or clinical research experience as an undergraduate student
- Experience in statistical software such as SPSS or R
- Preference given to those with previous experience includes children or adolescents.
- Strong organizational skills and an ability to work independently
- A strong interest in a future career in clinical psychology research or medicine. This position is particularly suitable to post-bachelor's student looking to go to graduate school in clinical psychology or medical school, and to date all Coordinators have had the opportunity to continue graduate studies in outstanding graduate programs.

We will begin interviewing for these positions as soon as suitable applicants have applied. We expect to fill the position by April 2019, and will be conducting interviews during February-March 2019.

If interested in applying, please email a statement of interest, a C.V. or resume (including GPA and best estimate of SAT scores(or GRE if taken)) **and** a transcript (unofficial acceptable at this point) to Ms. Ellen Andrews via email at [eandre8@emory.edu](mailto:eandre8@emory.edu)
