The **Fundamentals of the Adolescent Brain (FAB) Lab** (PI: BJ Casey) at Yale University is seeking a full time Research Assistant to work on the Adolescent Brain Cognitive Development (ABCD) Study examining environmental and genetic factors that influence behavior and brain development throughout adolescence.

This is an excellent opportunity for a motivated individual who would like to gain research experience in preparation for a graduate career. Application review will take place on a rolling basis until the position is filled.

The Research Assistant's primary responsibilities include participant recruitment and testing (behavioral, psychophysiological, and brain imaging), management of datasets, and lab administration.

The ideal candidate will hold a B.A./B.S. in a related field such as psychology, neuroscience, or computer science, have experience working with human participants with an emphasis on working with children and adolescents, general proficiency with MAC and Windows, Microsoft Office and Creative Cloud Suite. Additional highly desired qualifications include ability with Unix commands, brain imaging software (e.g., FSL, AFNI, SPM or similar), and programming cognitive tasks in E-Prime or similar.

If interested, please contact Dr. BJ Casey at [fablab@yale.edu](mailto:fablab@yale.edu) and include your CV/resume and a cover letter.
