

Internship with Happify Health

Happify Health, a digital therapeutics company based in NYC and Boston, is hiring 2 remote summer interns (est. June 1-August 31) to work on a digital therapeutic study for people living with poorly managed type 2 diabetes. Study support activities include serving as consistent patient contact person for screening, tech/troubleshooting, and reminders (about 25 hrs/week). With the rest of the intern's available time, they will attend lab meetings and gain experience in areas of the company that interest them. Example areas of interest may include: FDA regulated clinical trials for mental illnesses, data science/AI, mental health interventions for teens, and interventions in other chronic health conditions. Independent research projects/aiming for publication highly encouraged.

Stipend \$5000 for the summer with potential for hourly part time work into the 2020-2021 academic year. Interns must be U.S. residents. Graduate students are preferred, but qualified undergraduate students are encouraged to apply. Interested students should send a letter of interest and CV to Chief Scientist, Acacia Parks, at acacia@happify.com (opens in new tab) by **Sunday, May 17th** with subject line "Happify Health Summer Internship".

Students who are interested in gaining industry experience with Happify Health but cannot participate in this particular internship are encouraged to contact Eliane Boucher, Research Associate for Happify Labs, at eliane@happify.com to express interest so that we can keep you updated on future opportunities as they arise!
