Clinical Research Internship

PEDIATRIC ANXIETY RESEARCH CENTER
Bradley Hospital
The Warren Alpert Medical School of Brown University

The Pediatric Anxiety Research Center (PARC) at Bradley Hospital/The Warren Alpert Medical School of Brown University is looking for motivated college undergraduates with an interest in research and psychology for an internship position beginning in summer of 2019, with the option to begin sooner depending on student availability and interest. The student would be assisting with the BRAVE and IMPACT studies, and the Intensive Program for OCD research. More detailed descriptions of all projects can be found at the following link: https://www.anxiouskids.org/current-research.

Primary responsibilities include, but are not limited to, data entry, the preparation and storage of weekly therapy documents, screening therapy tapes, administering neuropsychological tasks, consenting participants, and assisting with various research and administrative tasks as they arise. For motivated students, there is the opportunity to attend clinical and research meetings and participate in multidisciplinary discussions with research assistants and PARC faculty. A qualified student will have excellent organization skills, attention to detail, strong communication skills, and an interest in clinical research. Relevant previous work or classroom experience is helpful. Students are expected to commit meaningful time to the internship—a minimum of 10-15 hours per week for the summer.

Past clinical research interns have received independent study credit or applied for outside funding to support their time at PARC, and we are happy to provide any feedback or documentation necessary for eligible students. To apply, please send a cover letter and resume/CV to Aishvarya Arora at Aishvarya.arora@lifespan.org. We will review applications as they are received.
