

**Post Graduate Research Assistant**  
**at Yale OCD Research Clinic of Psychiatry Department, Yale School of Medicine**

We are seeking applicants for a Post-Graduate Research Assistant position to support an exciting new research project applying computational analysis to the understanding of neuropsychiatric disease. We are applying drift-diffusion models to examine perceptual and value-based decision making in obsessive-compulsive disorder (OCD), at the behavioral and neural levels.

This is a one-year position, with a possibility to extend for an additional year. The position is full-time. Available immediately. Will be filled as soon as a suitable candidate is found. This is an excellent opportunity to learn a range of different aspects of clinical research. The post-graduate assistant will work closely with study participants from clinical and healthy populations, conduct clinical assessments, collect and analyze behavioral and neuroimaging data, and participate in manuscript preparation.

We are looking for applicants with a variety of backgrounds; experience with behavioral research is a plus. The most important qualifications are that you're smart, curious, driven, computer-savvy, and great at communicating.
