

Research Assistant – Behavioral Medicine & Division of Research

Drs. Ana Abrantes and Lisa Uebelacker are seeking a full-time research assistant to work on an NIH-funded research project starting in **June or July 2018**. The research assistant will work on a clinical trial comparing different interventions intended to help people with depression increase and maintain physical activity. Research assistants will join our team of physicians, psychologists, exercise physiologists, and other staff. Responsibilities include participant recruitment, diagnostic interviews with research participants, tracking participants, and data collection. In addition, some other work on studies related to physical activity or mood disorders may be involved. The position is based at the Butler Hospital Behavioral Medicine and Addictions Research (BMAR) Program, located in Providence, Rhode Island. Butler Hospital is affiliated with Alpert Medical School of Brown University. For more information about our research, please refer to faculty member's web pages, located at: <http://vivo.brown.edu/people>.

In addition to completing the online application form at www.butler.org, please send your cover letter and resume to Ms. Alexia Minto at aminto@butler.org.

Please see text of the specific job posting below.
