The BRAINS Lab led by Dr. Antonia Kaczkurkin at Vanderbilt University seeks applicants for a research assistant (Term Research Analyst I). The lab’s research program focuses on understanding the neurobiological mechanisms that contribute to internalizing disorders. The lab integrates multimodal measures such as functional magnetic resonance imaging (fMRI), cerebral blood flow, brain structure, psychophysiology (e.g., electroencephalography (EEG), startle blink, and skin conductance), as well as behavior to develop a comprehensive understanding of the basic mechanisms underlying anxiety and depressive disorders. For more information about the lab, please visit: https://brains-lab.webnode.com/ The research assistant will participate in a wide range of activities that support the lab including fMRI, EEG, and behavioral data collection. Candidates should hold a bachelor’s degree, preferably in psychology, biology, or neuroscience. This position is ideal for a candidate interested in gaining hands-on experience before pursuing doctoral training in psychology, medicine, neuroscience, or a related field.
