

Research Assistant Position in Cognitive and Affective Neuroscience at San Diego State University

A full-time research assistant position is available in the laboratory of Emily Kappenman at San Diego State University. Initial appointment is for 1 year, and start date is flexible.

The Kappenman laboratory focuses broadly on cognition and emotion in healthy adults and disruptions in these processes in individuals with psychopathology (such as anxiety, depression, or schizophrenia). We use a combination of psychophysical measures, behavior, and EEG/ERPs. More information is available on our lab website at www.emilykappenman.org

The position involves a mix of research and lab management. The ideal candidate would have excellent interpersonal and organizational skills and substantial research experience using at least one of our laboratory's main methods. Experience or coursework in computer programming, including crunching numbers in Excel, data analysis in Matlab, and/or stimulus presentation in E-Prime or Presentation is desirable. This is an excellent position for someone who would like to obtain additional research experience before going to graduate school.

To apply, send a cover letter, resume, and a letter of recommendation to Jaclyn Farrens (kappenmanlabmanager@gmail.com).

For more information, please contact Emily Kappenman at emily.kappenman@sdsu.edu
