Position Overview:

The Stanford Neurodevelopment, Affect, and Psychopathology Laboratory (Ian Gotlib, Director) is seeking applicants for research assistant positions. Research Assistants will work closely with highly trained staff members, post-doctoral fellows, and graduate students in the lab to conduct and coordinate behavioral and neuroimaging components of our many studies. In our research we examine the neural substrates of emotional dysfunction in depression and anxiety as well as cognitive and biological mechanisms that underlie children’s risk for developing psychopathology. Because our studies span a wide age range, lab members have the opportunity to gain valuable research skills and interact with infants, children, and adults in both clinical and non-clinical populations. Our lab is highly collaborative and provides opportunities to explore professional interests within clinical psychology, cognitive and affective neuroscience, and developmental psychopathology.

General Responsibilities:

- Running/assisting with behavioral and/or MRI brain scan sessions
- Managing and pre-processing data
- Assisting with setup and execution of projects
- Working closely with other lab members to coordinate projects
- Scheduling participants for sessions

Expectations and Requirements:

- 20-40 hours per week- schedule must be flexible because some weekend and evening availability is required.
- A minimum 6 month commitment is preferred.
- Previous experience with research, computer programming, neuroimaging, or working with clinical populations is preferred but not required because we offer extensive training.

Contact Information:

Interested candidates should submit a CV or resume to the Stanford Neurodevelopment, Affect, and Psychopathology Laboratory at moodlab.fmri@gmail.com with “SNAPLab Research Assistant Position” in the subject line or email with questions. Please include relevant information regarding your availability (e.g., anticipated graduation date, other commitments, etc.).
