Summer 2018 Research Internship with The Cooperation Lab at Boston College

The Cooperation Lab at Boston College directed by Katherine McAuliffe is seeking motivated, reliable and enthusiastic summer research assistants who would like to gain experience with research in social cognitive development. Research in the lab focuses on the development of cooperative abilities in children, with a particular focus on how children develop a sense of fairness.

Internship Description
Summer research responsibilities include participant recruitment, help running studies both in the lab and in outdoor spaces, debriefing parents, data entry and video coding. Additionally, research assistants will be involved in an informal reading and research group and will gain hands-on experience working with data. Research assistants will work closely with other team members and will be supervised by the Cooperation Lab’s director and lab manager.

Eligibility and requirements
Research assistants are asked to commit approximately 40 hours per week to research in the lab and should be open to the possibility of testing outdoors and on weekends. The tentative start date for positions is as early as May 29th and as late as June 4th. Positions will last for 10-11 weeks. These are unpaid positions so students are encouraged to seek funding from outside sources and/or their home institutions.

Anyone is welcome to apply. To do so, please complete our online application * and send a CV or resume to lmcooperation@gmail.com with the subject line “Summer 2018 Research Assistant Application”. There is no deadline for submission but we are eager to find motivated assistants as soon as possible and so we'll review applications as they come in.
