

BS/MS Scientist- Protein Therapeutics (CV and Metabolic Disease) at Novartis

Location: Cambridge, MA

Functional Area: Research & Development

Therapeutic/Disease Area: Cardiovascular and Metabolism

Job Type: Full Time

Job Description:

Novartis Institutes for BioMedical Research (NIBR) is seeking a BS/MS level Protein Therapeutics scientist to join our Cardiovascular & Metabolism (CVM) group in Cambridge MA.

Scientist to participate in the expression, purification and characterization of antibody and recombinant protein therapeutics targeted for cardiovascular and metabolic diseases.

She/he will conduct and interpret a diverse array of molecular biology, biochemical and cell-based studies to produce, screen, and evaluate tool and therapeutic antibodies and proteins, including the quantification and optimization of their binding affinities, specificities, activities, and therapeutic drug levels in preclinical development.

Minimum Requirements:

BS or MS degree in biomedical engineering, biophysics, biochemistry, chemistry or biology with 3 years of experience in tissue culture, cell-based assays and antibody research, preferably in the pharmaceutical or biopharmaceutical industry;

Experience in cardiovascular and metabolic disease is desirable;

Broad scientific foundation, strong work ethic,

Excellent oral and written communication, and ability to function in an interdisciplinary team setting are essential.
