

Neuroimaging Research in the Clinical Research Laboratory

Faculty Supervisor: Dr. Jill Hooley

Graduate Student: Tina Chou

We are looking for at least one undergraduate volunteer to help with a neuroimaging study on individuals at risk for emotional disorders. We are interested in how changes in self-referential processes may influence psychological symptoms. The student(s) will be primarily working with Tina Chou who is a rising fourth year graduate student in the Clinical Research Laboratory.

The ideal candidate would be able to volunteer for at least two semesters (Summer 2015 and Fall 2015) and either have an interest in or prior experience with clinical neuroimaging (functional magnetic resonance imaging or fMRI). Over the summer, the student(s) will be trained in MRI safety and observe MRI scans. During the Fall semester, the student(s) will assist with MRI scans and questionnaire scoring/data entry. Volunteering for course credit during the Fall semester is possible and volunteers are encouraged to attend weekly lab meetings in the Fall semester if interested.

Please send an email with your CV, your availability during the summer, and a few sentences about why you are interested in this position to Tina Chou at tinachou@fas.harvard.edu.
