

**Research Data Analyst Associate  
Affective & Clinical Neuroscience Laboratory  
Northwestern University  
Director: Robin Nusslock, PhD**

We are hiring one (1) full-time with benefits data analyst associate to work on NIH-funded projects examining the role of neuroimmune signaling in generating both risk and resilience for mental and physical health problems. The goal of this work is to better understand how "stress gets under the skin" during development to increase risk for depression, addiction, and co-occurring cardiometabolic health problems. This is an ideal position for a candidate interested in gaining hands-on experience before pursuing medical school or a PhD program in neuroscience, psychology, or a related field.

This position involves managing and processing multi-modal data collected on children, adolescents, and young adults. This includes self-report, behavioral, and both structural and functional MRI data of the brain. This position will also include using neuroimaging and statistical packages in MATLAB, Python, and/or R to create data management and analysis scripts.

The successful applicant will join our vibrant lab team and the exciting academic community at Northwestern University in Evanston, IL. The ideal applicant will have a BS/BA, prior experience in a psychological science setting, and a strong background in data and/or computer science. The position is guaranteed funding for one (1) year, with the possibility to extend based on performance and grant funding. Please visit our website to learn more about our lab: <https://acnlnorthwestern.com/>
