

PI: John Torous, MD

Location: Division of Digital Psychiatry, Beth Israel Deaconess Medical Center, Harvard Medical School

Position: 50% Research Assistant

Salary: \$22,000 + benefits

Start Date: Immediate (in September)

Description: Our group is seeking a 50% effort research assistant. This is a unique role to support a hospital in Needham around the implementation of smartphone tools into care pathways. The applicant for this role needs to be based already near Needham or be able to drive there 2 days per week. The applicant should be comfortable working with patients and interacting with busy clinical teams. Opportunities are also available for the research assistants to be involved in supervised clinical and neurocognitive assessments. Multiple publications may also be afforded, as well as opportunities to present at conferences around the country.

This is a 50% part-time role and cannot be done remotely. Interested applicants should contact Sean Ryan (sryan12@bidmc.harvard.edu) with an attached cover letter, including when you could start and how you could be on-site at Needham at least two days per week. Given the part-time nature of this role, only people already living nearby should apply. While we hope to make this a full-time role soon, we cannot guarantee that currently.
