

Clinical Research Assistant Position

Emma Pendleton Bradley Hospital

Position

Our research program focuses on advancing our understanding of the brain and behavior mechanisms underlying psychiatric disorders, with a particular focus on autism spectrum disorder.

Under the supervision of the principal investigator, the clinical research assistant will assist in the acquisition and analysis of participant information, including research assessments, medical record review, magnetic resonance imaging (MRI) scanning, and will have opportunities to prepare and participate in presentations, posters and manuscripts. This research experience would be helpful for candidates interested in applying for graduate and/or medical school in the future. A two-year commitment is preferred.

Qualifications

Bachelor's Degree in psychology, neuroscience, biological or behavioral sciences or related area, including courses in research methodologies and statistics. Excellent communication (verbal and written) and computer skills, strong organizational and interpersonal skills, and ability to work well with children, adolescents and parents. Minimum of six months of research experience. Prior research experience in human subjects (including with children and/or adolescents with neurodevelopmental and/or mental health conditions), psychology, neuroscience, neuroimaging, or a data-driven behavioral science is preferred.

Responsibilities

- Recruit participants for research studies. Interview participant and/or family to explain the nature of study; conduct telephone interviews; complete research assessments with children and families. Facilitate obtaining signed consent forms. Establish and/or maintain study record for each participant.
- Work within the team to gather MRI neuroimaging data.
- Analyze data by using Microsoft Excel, SPSS and MRI image analysis software, and prepare data for presentation.
- Assist with Institutional Review Board applications.
- Review medical records to abstract information per study protocols.
- Review literature pertaining to research and assist in presentation/manuscript/grant preparation and in planning research protocols.
- Coordinate activities of others assigned to research projects.

How to Apply

Emma Pendleton Bradley Hospital, known as Bradley Hospital, opened in 1931 as the first children's psychiatric hospital in the United States. A Lifespan partner and teaching hospital for The Warren Alpert Medical School of Brown University, Bradley Hospital has established itself as the national center for training and research in child and adolescent psychiatry. It trains the next generation of behavioral health clinicians and investigates the causes of children's mental health problems to develop effective therapies for improving their lives.
