

Role: Clinical Research Coordinator at MGH Center for School Behavioral Health

Job Summary

The Center for School Behavioral Health (CSBH) at Massachusetts General Hospital is transforming how schools support youth mental health by integrating prevention and early intervention directly into educational settings. Our mission is to: (1) foster collaborative partnerships across sectors; (2) build school capacity to support student behavioral health; (3) uplift innovative, research informed prevention and intervention models; and (4) translate research into sustainable, scalable practice and policy.

CSBH is hiring a Clinical Research Coordinator who will be working independently and under general supervision of the Center Program Director and/or the study Principal Investigator(s). Clinical Research Coordinators provides support for multi-year clinical research studies at CSBH. The coordinator's responsibilities at CSBH will include working both in the lab and at data collection sites outside of MGH. He/she/they will be responsible for patient scheduling and recruitment as well as all subject-oriented study procedures, such as administration of psychiatric scales, careful monitoring of adverse events, administrative duties related to the careful operation of study protocol, and database management and quality assurance.

Please visit the center website (www.mgh4schools.org/) for additional information about current projects. We like to place new hires on studies that most interest them, but staffing decisions may also be dependent on funding and center needs. We encourage and invite people from underrepresented backgrounds to apply.

Qualifications

Please note, the functions below are representative of major duties that are typically associated with these positions. Specific responsibilities may vary based upon departmental needs. Similarly, not all duties that have been outlined will be assigned to each position.
