

Clinical Research Coordinator in the Mood and Behavior Lab at Massachusetts General Hospital

We are currently looking to hire **1 to 2 full-time research assistant (RA)** to join us at Massachusetts General Hospital/Harvard Medical School.

The RAs will assist with NIMH-funded studies aimed at improving short-term risk prediction for suicidal behavior in youth. We are particularly seeking candidates who demonstrate the character, integrity, and work ethic to excel in a collaborative work environment with a clinically sensitive population. Studies assessing proximal risk for suicidal behavior use computational methods to model neurocognitive markers and/or ambulatory indices (i.e., mobile technology including actigraphy, passive sensing of physiological arousal, passive sensing of social engagement and physical activity, and ecological momentary assessment) in psychiatrically hospitalized youth. Other studies use computer vision, acoustic and visual sensing, social media analysis, and electronic health record-based algorithms to identify and predict suicide risk.

The RAs will work under the mentorship of [Dr. Richard Liu](#) and [Dr. Taylor Burke](#) at Massachusetts General Hospital. This position is particularly well suited for individuals seeking to gain research and clinical experience prior to graduate or medical school. RAs who demonstrate potential and excel in this position often have opportunities to receive mentorship on conducting independent research projects and grant-writing. More details about these opportunities and a list of our RAs' 1st author papers and extramural grants from their time in our lab may be found [here](#).

Application information: **The start date is summer 2026.** Interested applicants are invited to submit a cover letter and CV through [this link](#). Any questions may be directed to mghmoodandbehaviorlab@gmail.com.
