

**PI:** John Torous, MD

**Location:** Division of Digital Psychiatry, Beth Israel Deaconess Medical Center, Harvard Medical School

**Position:** Research Assistant

**Salary:** \$44,000 + benefits

**Start Date:** Immediate (in August)

**Description:** Our group has several focuses including 1) investigating smartphone-based digital phenotyping to predict relapse in mental health, 2) developing digital health tools for supporting depression and anxiety care, and 3) supporting digital health access and equity. Our goal is to understand how new forms of digital psychiatry may improve the quality and accessibility of treatment for mental illness through education, research, and innovation. Opportunities are also available for the research assistants to be involved in supervised clinical and neurocognitive assessments. Multiple publications may also be afforded, as well as opportunities to present at conferences around the country. Prior research assistants have each had first-author publications and have presented at national or international meetings.

For this current opening, some experience with Python, even if basic, is important.
