

The **Longitudinal Research Program in Late-Life Suicide** with the University of Pittsburgh is seeking to hire a full-time Research Project Coordinator and a Research Specialist to begin late summer/early fall 2022 (flexible start date). Suicide rates are comparatively higher in older adults than any other age group, but suicide in the elderly is relatively unexplored. Our research lab seeks to understand the interacting risk and protective factors related to biological and psychosocial factors of aging that lead to the elevated suicide rate in late life.

More information about the lab's research can be found at gsuicide.pitt.edu. An ideal candidate will hold either a bachelor's or master's degree in Psychology or a related field, equivalent work experience, and have working knowledge of clinical mental health assessment.
