Laureate Institute for Brain Research

NEUR CATT

NeuroCognitive aspects of
Anxiety, Trauma, and Treatment

JOIN OUR TEAM!

RESEARCH ASSISTANT

- Drive innovative, clinically focused research on therapeutic interventions for a range of topics related to mental health including: PTSD, traumatic brain injury, substance use, and depression/anxiety.
- Lead participant engagement from recruitment through study completion - conduct screenings, administer interviews and assessments, and ensure an exceptional research experience.
- Collect high-quality data utilizing a multi-level approach - fMRI, EEG, neuropsychological assessments, as well as collection of other behavioral and physiological data.
- Oversee study coordination - schedule visits, partner with internal and external teams, keep protocols running smoothly and on time, and support participants throughout study.
- Manage data, support analyses, and contribute to recruitment efforts that keep studies moving forward.
- **REQUIRED:** Bachelor's Degree in psychology, neuroscience, or closely related field. Master's degree preferred.

MISSION

- The research mission of the lab is to conduct translational neuroscience research that has the potential to inform our understanding and optimization of psychotherapy interventions.
- Among our highest values is having engagement and input from diverse brains, backgrounds, and viewpoints, which will enable us to tackle important research questions in ways that most benefit the community.
