

Research Assistant at Vanderbilt

Research Assistant II

The individual in this position will be involved in coordinating a longitudinal study and participate in many aspects of the research process, including recruitment of pregnant individuals and families into the study, scheduling and coordinating study visits, ensuring completion of a broad range of questionnaires and assessments, and providing administrative support to the study. Data collection for this study involves acquisition of MRI data, laboratory-based parent–child interactions, home visits, in addition to interviews to assess mental health and exposure to stress and adversity. Experience gained in this position will be particularly useful for those hoping to continue working in a research environment, including pursuing a graduate degree. An ideal candidate would remain in the position for at least 2-3 years. Previous relevant research experience preferred.
