

Research Coordinator in the Center for Technology and Behavioral Therapy at Dartmouth College

CTBH is seeking a Research Coordinator to coordinate and facilitate the development, implementation, and evaluation of an innovative digital mental health platform at Dartmouth College that combines AI-driven support with passive behavioral sensing technology. This position will play a crucial role in managing the co-creation process with students, overseeing content development, coordinating participant recruitment and engagement, and ensuring high-quality data collection and analysis. Working within a team of research coordinators, this position will help demonstrate how universities can effectively develop and implement AI-driven mental health support systems through collaborative research with their student communities. The role requires flexibility to work across different aspects of the project, from content development to implementation and evaluation phases.
