

**Seeking Full-Time Research Assistant
Binghamton University (SUNY) Mood Disorders Institute**

The Binghamton Mood Disorders Institute at Binghamton University (mood.binghamton.edu) is seeking to hire 1-2 full-time Research Assistants to start as soon as July 1, 2022. This is a full-time grant-funded position to assist with an NIMH-funded project examining mechanisms of risk for the intergenerational transmission of depression, with a focus on the role of attentional biases during the transition from childhood to adolescence (computer-based and mobile eye tracking, steady state visual evoked potentials). Duties will include coordinating participant recruitment, preparation of study materials, participant assessments, and database management. The research assistant will also have opportunities to co-author scientific papers and journal articles. Salary will be \$33,800 per year plus health insurance.

Qualifications include a BA/BS in psychology or other scientific field, including coursework in research methods and/or statistics. Successful candidates will demonstrate a conscientious work style and strong interpersonal skills. Candidates with experience with eye tracking, EEG/ERP, psychophysiological assessments, and/or structured diagnostic interviewing are particularly encouraged to apply. This is an excellent position for a college graduate who is interested in gaining additional research experience before going on to graduate study in clinical psychology.
