Research Study Assistant at Northwestern University

Dr. Stewart Shankman is seeking two research study assistants for his lab at Northwestern University to assist on NIMH and/or industry-funded projects. Broadly, research in the lab examines (a) basic mechanisms and risk factors underlying mood and anxiety disorders, and (b) novel treatments for these conditions. Our lab utilizes multiple methods in this work, including behavioral, physiological, neural, and genetic tools. The Research Assistants will have the opportunity to gain experience in experimental design, recruitment, data collection and analysis. Opportunities for co-authoring manuscripts and conference presentations will also be available. The position will also provide the opportunity to learn about psychophysiological and psychopathological theory and research more broadly. Successful applicants will have experience in psychological, neuroscience (or related area) research and quantitative data analysis and have strong organizational and writing skills.
