

**Research Assistant –
Motivation and Cognitive Control Across the Psychosis Spectrum
at Washington University in St. Louis**

.....
We are looking for a FULL TIME research assistant to work on the project described below. YOU MUST HAVE PRIOR HUMAN SUBJECT RESEARCH EXPERIENCE. If you are interested, please send a resume to Deanna Barch (dbarch@wustl.edu). We would love someone to start as soon as possible, though we can work with someone who is a senior and will graduate after this semester.
.....

PURPOSE: The purpose of this position is to have a research assistant as part of a large-scale project to cognitive function, motivation, and reward processing across the psychosis spectrum. The person will: 1) have responsibility for testing and scanning participants using task-based functional magnetic resonance imaging (fMRI) and behavioral/cognitive/computerized testing or electroencephalography; 2) help with preprocessing and quality control of imaging and behavioral data; and 3) work with a team of other research assistants to assess a large sample of individuals with task and resting state fMRI and EEG and behavioral data as part of the project.
