

Staff Research Associate Positions in the STaR Lab at the San Francisco VA

We're hiring one full- and/or part-time Staff Research Associate (SRA I or II) in the STaR Lab at the San Francisco VA (NCIRE/UCSF). The position is in-person, focused on PTSD, sleep, TBI, and fear learning in Veterans.

The lab studies how trauma affects the brain, body, and sleep and runs clinical trials combining evidence-based PTSD therapies with medications that target fear extinction and related mechanisms. We're looking for someone with at least 2 years of prior research experience who is interested in trauma/PTSD, psychophysiology, and working closely with Veterans; candidates with more extensive clinical research / trial coordination experience may be considered at the SRA II level.
