

Laboratory Manager in Better Outcomes Laboratory at Cornell University

We are seeking a full-time lab manager for the new Better Outcomes Laboratory. This laboratory will examine long-term functioning and well-being after depression and related mental health conditions, with particular focus on understanding good outcomes. This position will provide an excellent research and training environment to learn about emotion theory and research more broadly. As the successful candidate, you will have the opportunity to perform research and gain experience in study design, recruitment, data collection, clinical interviewing, and data analysis. This position is ideal for individuals interested in pursuing a Ph.D. in clinical psychology or a related field. The lab manager will work closely with the Principal Investigator (Jonathan Rottenberg) to manage daily activities of the lab and assist with all aspects of the research process on multiple projects. Our group strongly values mentorship and professional development, and the incumbent will have opportunities that lead to independent projects, co-authoring publications, and presenting at conferences. A two-year commitment is strongly preferred, with an initial appointment of one year and renewal contingent on available funding, available work, and successful performance.

Primary responsibilities will include recruiting and screening participants (online and in person); collecting data (behavioral tasks, online surveys, clinical interviews); data management, cleaning, and analysis; training and supervising undergraduate research assistants; and general administrative duties to maintain the workings of the lab (e.g., assisting with IRB protocols; laboratory purchasing; maintaining lab website and lab documents).

Successful applicants will have experience in conducting psychology research and have strong organizational, interpersonal, and writing skills.
