

Research Assistant at Vanderbilt University

The person in this position will help collect and analyze behavioral, EEG, and fMRI studies of psychopathology symptoms, with a focus on internalizing symptoms. The Term Research Assistant I will participate in a wide range of activities that support the lab such as overseeing IRB compliance, screening and recruiting participants, conducting clinical interviews, administering cognitive tests to participants, collecting EEG and neuroimaging data, monitoring ecological momentary assessment data collection, training volunteers, managing subject payments, updating the lab manual and website, purchasing supplies, maintaining databases, assisting with data processing and analysis, contributing to manuscript preparation, and assisting with grant-related documents. This position is ideal for a candidate interested in gaining hands-on experience before pursuing further training in psychology, medicine, neuroscience, or a related field.
