

**Research Assistant –  
Adolescent Brain and Cognitive Development Study at WUSTL**

***We are looking for a FULL TIME research assistant to work on the project described below. YOU MUST HAVE PRIOR HUMAN SUBJECT RESEARCH EXPERIENCE. If you are interested, please send a resume to Deanna Barch ([dbarch@wustl.edu](mailto:dbarch@wustl.edu)). We would love someone to start as soon as possible.***

**PURPOSE:** The purpose of this position is to have a research assistant as part of a large-scale project to study health, behavior and brain structure and function in children and adolescents. The person will: 1) have responsibility for testing and scanning participants using task-based functional magnetic resonance imaging (fMRI) and behavioral/cognitive/computerized testing; 2) help with preprocessing and quality control of imaging and behavioral data; and 3) work with a team of other research assistants to assess a large sample of individuals with task and resting state fMRI and behavioral data as part of the project.
